AI Prompts for Career and Co-op Advising

1. Resume Optimization_____..... 1
1.1 Resume-Job Description Alignment..... 1

1. Resume Optimization_____

1.1 Resume-Job Description Alignment

I'm a graduate student in [Computer Science/Data Science/AI] and I want to use you as a brainstorming partner to think through how my resume aligns with a specific job description. Please analyze both and give me:

Top 3 highest-impact changes I should consider, with a brief explanation of why each one matters for this role.

Then, a **tiered list** of additional observations organized as:

- "Worth revisiting" -- changes that could strengthen my application
- "Nice to have" -- smaller refinements if I want to go further

For any bullet points you flag, do not suggest rewrites or example language. Instead, ask me 1-2 targeted questions that help me identify what's missing or could be stronger. For example: "What was the scale of the dataset you worked with?" or "Did this project produce a measurable outcome?"

Throughout your response, use plain and specific language. Avoid generic resume buzzwords like "leveraged," "spearheaded," "utilized," or "dynamic."

Finally, ask me: "Which of these suggestions reflect experience you can speak to confidently?" This will help me decide what to incorporate and what to leave out.

[Paste job description here] [Paste current resume her]

1.2 Skills Identification
I need help identifying the key soft and transferable skills that are highlighted in this job description. Please analyze the job posting and:

1. Extract all soft skills explicitly mentioned (communication, leadership, etc.)
2. Identify transferable skills that are implied or suggested. Pay attention to the company and the industry as well (i.e. startups may prefer candidates with demonstrated flexibility)
4. Highlight skills that appear multiple times or seem prioritized
6. Suggest how these skills might be demonstrated in academic or project contexts

What key soft and transferable skills are highlighted in this job description?

[Paste job description here]

1.3 Skills Translation and Highlighting
I need help identifying and articulating transferable skills from my academic and project experience for industry roles. Please review my resume and the job description, then help me:

1. Identify soft skills demonstrated through my projects/research
2. Translate academic experiences into industry-relevant language
3. Highlight leadership, collaboration, and problem-solving examples
4. Suggest how to quantify achievements where possible
5. Recommend which skills to feature most prominently

Focus on skills like project management, cross-functional collaboration, data-driven decision making, and technical communication.

[Paste job description here]
[Paste current resume here]

1.4 Technical Skills Optimization
As a CS/DS/AI graduate student, I want to optimize the technical skills section of my resume. Please help me:

1. Organize my technical skills by relevance to the target role
2. Identify any missing technical skills I should develop
3. Suggest how to demonstrate proficiency levels appropriately
4. Recommend which technologies to emphasize or de-emphasize
5. Advise on including emerging technologies vs. established ones

Consider the job requirements and provide a prioritized list of technical skills to highlight.

[Paste job description here]
[Paste current technical skills section here]

1.5 Project Description Enhancement
I need to improve how I describe my academic projects, research, and personal projects on my resume. I want the descriptions to reflect genuine impact and be relevant to the roles I'm targeting, but I want to do the writing myself.
Before making any suggestions, ask me 2-4 targeted questions per project to help me uncover:

1. The specific technical decisions I made and why
2. Any measurable outcomes, even informal ones (time saved, performance improved, scope of the work)
3. The real-world relevance or business value of the project
4. How the work connects to the type of role I'm targeting

After I answer, help me identify which details are most compelling and relevant to the target role. Do not rewrite my bullets or suggest specific language. Instead, tell me what's worth emphasizing and what's missing, so I can revise the descriptions myself. Use plain, specific language throughout. Avoid generic resume buzzwords like "spearheaded," "orchestrated," or "dynamic."
[Paste job description here OR describe types of roles and industries you are applying to]
[Paste current project descriptions here]

1.6 Resume Format and ATS Optimization
Please review my resume for both ATS (Applicant Tracking System) compatibility and human readability. Provide recommendations on:

1. Formatting improvements for ATS parsing
2. Section organization and hierarchy
3. Keyword density and natural integration, help me avoid too many “buzzwords”
4. Length and content prioritization
5. Contact information and header optimization

Also suggest any sections to add, remove, or restructure for maximum impact.

[Paste current resume here]
[Paste job description here]

1.7 Resume Gaps or Weaknesses
Compare my resume with this job description and identify any gaps or weaker areas. Please help me understand:

1. Critical requirements I'm missing or underrepresenting
2. Skills or experiences that need strengthening
3. Areas where my background doesn't align with their needs
4. Weak points that might raise concerns for recruiters
5. Suggestions for addressing these gaps through projects, courses, or experience that I can engage in during my time in graduate school to help me be a stronger candidate for similar roles in the future.

[Paste current resume here]
[Paste job description here

1.8

1.9 Multi-Job Fit Analysis and Ranking
I'm considering multiple job opportunities and need help determining which positions I'm the strongest candidate for. Please analyze my resume against these job descriptions and provide:
1. A ranked list of positions from strongest to weakest candidate fit
2. For each position, explain why it's a good fit or not a good fit
3. Specific strengths that make me competitive for each role
4. Key weaknesses or gaps that might hurt my candidacy
5. An overall assessment of my profile strengths and skill gaps across all positions
6. Strategic recommendations for which roles to prioritize in my applications

Please be specific about technical skills, experience levels, and qualifications that align or don't align with each opportunity.

[Add additional job descriptions as needed]

1.10 Resume Redundancy and Bullet Point Optimization
Please review my resume for redundant bullet points and repetitive content that showcases the same skills or experiences. Help me:

1. Identify bullet points that demonstrate similar or identical skills
2. Highlight repetitive language, phrases, or action verbs used multiple times
3. Find opportunities to consolidate or eliminate redundant content
4. Suggest how to diversify bullet points to showcase a broader skill set
5. Recommend which bullets to keep, modify, or remove for maximum impact
6. Ensure each bullet point adds unique value and demonstrates different competencies

The goal is to create a more concise, impactful resume where every bullet point serves a distinct purpose.

[Paste current resume here]

1.11 Resume Bullet Points: Tasks vs Accomplishments
Do the following bullet points sound like accomplishments or tasks? Please specify which ones sound like tasks and ask me questions to help me tailor them into accomplishment statements.

[Paste specific resume section here]

1.12 ATS Keywords
Based on the following job description that I am about to share, list the top 20 keywords that I should include in my resume to prove that I am the best candidate for this role.

(Note: only include keywords that accurately describe your experience, including about 60% of the 20 words is a good practice)

[Paste relevant job description here]

1.13 ATS Rating
You are an ATS Resume Auditor trained on how large companies (using systems like Lever, Greenhouse, Rippling, BambooHR, and Taleo — “LRBT”) screen resumes.

Please review my resume and:
- Identify ATS parsing issues (formatting, section headers, keyword density, etc.)
- Highlight any clichés or fluff (e.g. “team player,” “results-driven,” “passionate about”) that reduce keyword match or authenticity.
- Suggest specific, keyword-rich replacements that better align with [INSERT SPECIFIC

JOB APPLICATION LINK HERE] .

Score the resume across these categories (1–5 scale):
- Formatting & Structure
- Keyword Alignment
- Quantified Impact (metrics, outcomes)
- ATS Readability
- Authentic Tone

Give me a short “Next Steps” list to reach ATS–LRBT standard readiness.

Format your answer like this:
-Strengths
-Fixes Needed
-Top 5 Keyword Gaps
-Next Steps

1.13 Project Bullet Development Through Strategic Questioning
I need help strengthening the bullet points in my projects section by developing more detailed, impactful descriptions. For each project I list below, please generate 3-5 strategic questions that will help me uncover specific details, quantifiable results, and compelling context that I may have overlooked.

Your questions should help me identify:
1. Specific technical challenges I solved and methodologies I used
2. Quantifiable outcomes, metrics, or improvements (users impacted, performance gains, time saved, accuracy improvements, etc.)
3. The scale and scope of my work (dataset sizes, system complexity, team size, timeline)
4. Business value or real-world applications of the project
5. Collaborative aspects and stakeholder interactions
6. Technical skills and tools I can highlight more effectively

My current project descriptions:

[Paste your projects section here, including current bullet points for each project]
Target role (optional):

[Specify the type of position you're applying for to get questions tailored to relevant skills and experiences]

1.14 Resume Specificity and HOW Development

My resume bullet points describe WHAT I did, but they don't explain HOW I accomplished these tasks or achieved these results. Please review the bullet points I provide below and help me add specificity by asking strategic questions about my methods and approaches.

For each bullet point, please:

1. Identify where I've listed a task or responsibility without explaining my approach or methodology
2. Ask 3-5 targeted questions to uncover HOW I accomplished the work (e.g., "How did you support those individuals? Through 1:1 coaching? Group workshops? Shadowing sessions?")
3. Prompt me to add concrete examples where I use vague language (e.g., if I say "educational initiatives," ask me to specify which initiatives)
4. Help me understand which details would be most relevant to employers trying to assess my working style and transferable skills

The goal is to transform generic task descriptions into specific, method-focused statements that help employers draw clear connections between my past experiences and their role requirements.

My current bullet points: [Paste specific resume bullets that need more specificity here]

Target role (optional): [Specify the type of position you're applying for to get questions tailored to relevant methods and approaches]

2.Cover Letter Optimization

2.1 Cover Letter Creation and Optimization

Please help me write a compelling cover letter for this position that is:

- Professional and enthusiastic (but not overly so)
- Concise (under 400 words)
- Highly relevant to the job requirements
- Complementary to my resume, not repetitive

Structure the letter to:
1. Open with a strong, specific hook
2. Connect my academic/project experience to their needs
3. Highlight 2-3 key qualifications with brief examples
4. Show knowledge of the company and role
5. Close with confidence and clear next steps

Start by suggesting 3-4 major aspects of my resume to highlight in the cover letter. Ask me questions about my interest in the role to help me describe why I am interested in this company and this position.

Then, help me craft a rough draft of my cover letter. Ensure the tone is professional yet personable, demonstrating genuine interest. Tailor to my writing style based on my cover letter samples provided.

[Paste job description here]
[Paste resume summary or key experiences here]
[Upload 2-3 past cover letters to provide examples of your writing style]

2.2 Cover Letter Review and Enhancement
Please review my draft cover letter and provide specific feedback on:

1. Opening paragraph impact and relevance
2. Body paragraph flow and persuasiveness
3. Specific examples and quantifiable achievements
4. Company knowledge demonstration
5. Closing strength and call-to-action
6. Overall tone, length, and professionalism
7. Grammar, style, and readability

Suggest specific revisions to make it more compelling while maintaining authenticity.

[Paste job description here]
[Paste draft cover letter here]

3. Interview Preparation

3.1 Targeted Interview Questions Based on Role
Based on my resume and this job description, please generate 8-10 specific interview questions I'm likely to be asked. Include:

1. Technical questions related to my listed skills and projects
2. Questions about gaps or transitions in my experience
3. Role-specific scenarios I might encounter
4. Both behavioral and situational interview questions
5. Questions testing my understanding of the company's technical challenges

Provide suggested answer frameworks for each question.

[Paste job description here]
[Paste resume here]

3.2 Behavioral Interview Questions
Please provide 10 common behavioral interview questions for CS/DS/AI roles, along with:

1. The underlying competency each question assesses
2. A framework for structuring my answers (STAR method)
3. Tips for relating academic/research experiences to professional scenarios
4. Examples of how to quantify impact in my responses
5. Follow-up questions I might encounter

Focus on leadership, problem-solving, teamwork, conflict resolution, and adaptability scenarios.

3.3 Technical Interview Questions
Generate a technical interview question appropriate for an entry-level [Software Engineer/Data Scientist/AI Engineer] position that:

1. Tests fundamental concepts relevant to the role
2. Allows me to demonstrate problem-solving approach
3. Has reasonable complexity for a 15-20 minute discussion
4. Connects to practical work scenarios
5. May include a brief coding component or system design element

Please include the question, expected approach, and key points to cover in my response.

[Paste job description here - specify role type]

3.4 Company-Specific Motivation Questions

Based on this job description and company information, help me prepare for questions about:

1. "Why do you want to work at [Company Name]?"
2. "Why are you interested in this specific role?"
3. "How do you see yourself contributing to our team/mission?"
4. "What attracts you to our industry/product?"
5. "Where do you see yourself growing within our organization?"

Provide frameworks for authentic, well-researched responses that connect my background to their needs.

[Paste job description here]
[Paste any additional company information here]

3.5 Questions to Ask Interviewers

Help me develop thoughtful questions to ask my interviewers that demonstrate:

1. Understanding of the role and company challenges
2. Interest in professional growth and learning
3. Curiosity about team dynamics and culture
4. Knowledge of industry trends and company position
5. Genuine engagement with the opportunity

Provide 10-12 questions categorized by: - Technical/Role-specific questions - Team and culture questions - Growth and development questions - Company strategy and vision questions

[Paste job description here]
[Include any additional company research here]

3.6 Strategic Informational Interview Questions

I am a graduate student in [Computer Science/Data Science/AI] preparing for an informational interview with a professional in my target career field. Please generate 5-6 strategic, thoughtful questions that will help me gain valuable career insights and industry knowledge.

Please tailor the questions based on:

1. **Target Role** [e.g., "Senior Data Scientist at a fintech company," "AI Research Scientist," "Product Manager for ML products"]
2. **My Background** [Brief description of your current program, relevant experience, and timeline to graduation, upload resume copy]
3. **Specific Areas of Interest** [e.g., "day-to-day responsibilities," "career progression paths," "industry trends," "work-life balance," "technical vs. managerial growth"]
4. **Interview Context** [e.g., "alumni connection," "LinkedIn outreach," "conference networking," "company info session"]
5. **Company/Industry Focus** [Optional - any specific companies or industry sectors you're targeting]

Generate questions that:
- Progress from broad industry insights to specific role details
- Include at least one question about daily responsibilities and challenges
- Include at least one question about career development and growth opportunities
- Are appropriate for the professional relationship and context
- Help me understand both the opportunities and realistic challenges of the field
- End with a networking-focused question that opens doors for future connections

For each question, briefly explain its strategic purpose and the type of insights it's designed to reveal.

[Provide your specific information above]

Career Exploration

4.1 Role Clarity and Focus

I'm a graduate student in [Computer Science/Data Science/AI] and need help gaining clarity on what types of roles to target. Please help me:

1. Identify 5-7 specific job titles that align with my background
2. Understand the key differences between similar roles
3. Map my skills and interests to role requirements
4. Identify any skill gaps for my target roles
5. Suggest entry-level vs. more advanced positions to consider

Based on my background, recommend a focused job search strategy.

[Paste resume or background summary here]
[Include any preferences for industry, company size, location, etc.]

4.2 Career Goals Self-Assessment

Please provide a comprehensive set of self-reflection questions to help me clarify my career goals and preferences. Include questions about:

1. Technical interests and preferred working styles
2. Industry preferences and company culture fit
3. Short-term and long-term career aspirations
4. Work-life balance and location preferences
5. Learning and growth priorities
6. Impact and mission alignment
7. Compensation and benefits priorities
8. Risk tolerance and startup vs. established company preferences

Format these as a structured self-assessment I can work through systematically.

4.3 Target Company Identification

Based on my career goals, technical background, and preferences, help me identify my top 10 target companies by:
1. Analyzing companies that align with my technical skills in [specify: AI/ML, data science, software development, etc.]
2. Considering my preferences for [company size, industry, location, culture, etc.]
3. Evaluating growth opportunities and career development paths
4. Assessing company stability, reputation, and mission alignment
5. Identifying both well-known companies and promising startups/scale-ups

For each company, provide:
- Brief rationale for the match
- Typical entry-level roles to target
- Key information to research further
- Potential networking or application strategies

[Include background summary and preferences here]

5. LinkedIn Optimization

5.1 Complete LinkedIn Profile Optimization

Please help me optimize my LinkedIn profile for job searching in [Computer Science/Data Science/AI]. Review and provide recommendations for:

1. Professional headline that incorporates key skills and career goals
2. Profile photo and banner optimization tips
3. Experience section enhancement with industry keywords
4. Skills section prioritization and endorsement strategy 5. Education section optimization for graduate students
6. Projects and publications showcase
7. Recommendations and volunteer experience integration

Focus on making my profile discoverable by recruiters and compelling to hiring managers.

[Paste current LinkedIn profile content or resume here]

5.2 LinkedIn “About” Section Creation
Help me craft a compelling LinkedIn "About" section (150-300 words) that:

1. Opens with a strong value proposition
2. Highlights my graduate education and specialization
3. Showcases key technical skills and project experience
4. Demonstrates passion for the field and continuous learning
5. Includes relevant keywords for discoverability
6. Ends with a call-to-action for networking
7. Strikes a professional yet personable tone

The section should complement my resume while adding personality and context.

[Paste resume summary or key background information here]
[Include target role/industry focus here]

5.3 LinkedIn Job Search and Market Intelligence Strategy
Provide a comprehensive strategy for using LinkedIn to:

1. Set up effective job alerts for my target roles
2. Follow and engage with companies of interest
3. Identify and connect with industry professionals and recruiters
4. Stay current on industry trends and job market insights
5. Share content and engage authentically to build visibility

6. Research companies and hiring managers before applications
7. Leverage LinkedIn Learning and industry groups Include specific tips for graduate students transitioning from academia to industry, with actionable steps I can implement immediately.

[Include career focus and target roles here]
